Th Thorium Reiner Ditz 1990-07-25 In connection with the recent treatment of radium and the actinides, the Gmelin Institute is carrying out the description of thorium and its compounds. The Supplement Volumes A 2, A 3, A 4, and A 5 with the history, isotopes, uses, the recovery of thorium and general properties of thorium atom and ions, the thermodynamics of its compounds and solutions, spectroscopic data and analytical chemistry, biological behavior, health protection and safety control have already been

published. The Supplement Volumes C 1, C 2 and C 3 describing the compounds with the noble gases, hydrogen, oxygen compounds and nitrogen compounds are also available; also have been published Supplement Volumes C 5 and C 7 describing the compounds with sulfur, selenium, tellurium, and boron, carbonates, thiocynates, alkoxides, and carboxylates. The Supplement Volumes D 1, D 2, and D 3 describing the properties of thorium ions in solution and the solvent extraction of thorium as well as Supplement Volume E describing the coordination compounds also have been published. The present volume begins, in a summary fashion, with a description of the natural occurrence of the element Th. Especially stressed are those facts that are most important in understanding its geological distribution on Earth (as, e.g., mode of occurrence and distribution among minerals) and its behavior in minerals (as, e.g., mode of occurrence and distribution among minerals) and its behavior in minerals (as, e.g., diadochy and metamictization of minerals). Attached is a tabulation of the highest reported Th or ThO₂ content in minerals that normally (by their crystal-chemical formula) do not contain Th. The main part of the present volume describes the minerals of Th. As can be seen from the crystal-chemical formulas, there are, in addition to a few

minerals containing Th as the sole cation, a number of minerals that contain Th as an additional cation or as a diadochic element. In the case of diadochic substitution the mineral may represent a Th-rich end member of a solid-solution series and, therefore, is described as a separate Th mineral, or may only sporadically contain higher amounts of Th (no mineral description is given). The mineral descriptions, in this volume including oxides, carbonates and phosphates/siliconphosphates of Th, comprise the following topics: occurrence; chemistry; crystal form and structure; optical and other physical properties; and chemical and thermal behavior. The silicates of Th and the deposits of Th will be described in the volume "Thorium" Suppl. Vol. A 1b, that also contains a mineral index for both volumes.

T. H. White Sylvia Townsend Warner 1967 During a lecture given in the last year of his life, T.H. White explained how, throughout his life, he had armed himself against disaster by exploring new fields of knowledge. Sylvia Townsend Warner has written a biography which reveals White's humour and vivid imagination, and also his passionate enthusiasm -- the manner in which he would see a skill, pursue it with passionate curiosity and having mastered it, move on to something else, whether this was falconry or flying, painting or ploughing a field. The book traces White's brilliant career at Cambridge and his employment as a teacher at Stowe until a publishing contract allowed him to devote himself entirely to his novels. It explains how the journal he kept of his ill-fated attempts to train a falcon provided the basis for his book "The Goshawk", and how his continuing preoccupation with the

Arthurian legends led eventually to the four books of "The Once and Future King". The biography also describes his periodic dependence on alcohol, brought on by bouts of recurrent melancholy.

The Moral Philosophy of T.H. Green Geoffrey Thomas 1987 Examining Thomas Hill Green's moral philosophy, Thomas defends a radically new perception of Green as an independent thinker rather than a devoted partisan of Kant or Hegel. Green's moral philosophy, argues Thomas, includes a widely misunderstood defense of free will, an innovative model of deliberation that rejects both Kantian and Humean conceptions of practical reason, a barely

recognized theory of character, and an account of moral objectivity that involves no dependence on religion--all of which yield a coherent body of moral philosophy that raises important problems neglected in contemporary ethics.
