compounds and nitrogen compounds are also available; also have been published Supplement Volumes C 5 and C 7 describing the compounds with sulfur, selenium, tellurium, and boron, carbonates, thiocyanates, alkoxides, and carboxylates. The Supplement Volumes D 1, D 2, and D 3 describing the properties of thorium ions in solution and the solvent extraction of thorium as well as Supplement Volume E describing the coordination compounds also have been published. The present volume begins, in a summary fashion, with a description of the natural occurrence of the element Th. Especially stressed are those facts that are most important in understanding its geological distribution on Earth (as, e.g., mode of occurrence and

distribution among minerals) and its behavior in minerals (as, e.g., mode of occurrence and distribution among minerals) and its behavior in minerals (as, e.g., diadochy and metamictization of minerals). Attached is a tabulation of the highest reported Th or ThO₂ content in minerals that normally (by their crystal-chemical formula) do not contain Th. The main part of the present volume describes the minerals of Th. As can be seen from the crystal-chemical formulas, there are, in addition to a few minerals containing Th as the sole cation, a number of minerals that contain Th as an additional cation or as a diadochic element. In the case of diadochic substitution the mineral may represent a Th-rich end member of a solid-

solution series and, therefore, is described as a separate Th mineral, or may only sporadically contain higher amounts of Th (no mineral description is given). The mineral descriptions, in this volume including oxides, carbonates and phosphates/siliconphosphates of Th, comprise the following topics: occurrence; chemistry; crystal form and structure; optical and other physical properties; and chemical and thermal behavior. The silicates of Th and the deposits of Th will be described in the volume "Thorium" Suppl. Vol. A 1b, that also contains a mineral index for both volumes.

The Moral Philosophy of T.H. Green Geoffrey Thomas 1987

Thomas Hill Green's moral philosophy, Thomas defends a radically new perception of Green as an independent thinker rather than a devoted partisan of Kant or Hegel. Green's moral philosophy, argues Thomas, includes a widely misunderstood defense of free will, an innovative model of deliberation that rejects both Kantian and Humean conceptions of practical reason, a barely recognized theory of character, and an account of moral objectivity that involves no dependence on religion--all of which yield a coherent body of moral philosophy that raises important problems neglected in contemporary ethics.

T. H. White Sylvia
Townsend Warner 1967
During a lecture given
in the last year of his
life, T.H. White
explained how,
throughout his life, he
had armed himself
against disaster by
exploring new fields of
knowledge. Sylvia
Townsend Warner has
written a biography
which reveals White's
humour and vivid
imagination, and also
his passionate
enthusiasm -- the manner
in which he would see a
skill, pursue it with
passionate curiosity and
having mastered it, move
on to something else,
whether this was

falconry or flying,
painting or ploughing a
field. The book traces
White's brilliant career
at Cambridge and his
employment as a teacher
at Stowe until a
publishing contract
allowed him to devote
himself entirely to his
novels. It explains how
the journal he kept of
his ill-fated attempts
to train a falcon
provided the basis for
his book "The Goshawk",
and how his continuing
preoccupation with the
Arthurian legends led
eventually to the four
books of "The Once and
Future King". The
biography also describes
his periodic dependence
on alcohol, brought on
by bouts of recurrent
melancholy.
